Directions: Decide on a team survey question and the possible responses. List the responses as choices on the Frequency Chart below (you may leave some rows blank). Each person conducts a survey and collects data from 15 different people. Record each name and choice on the Data Collection Chart, but do not tally the data until you are back with the whole team! Take turns reporting your data and making tally marks on the Frequency Chart. Your chart will end up with data from the entire team. Finally, create a line plot or a graph of your results to share with the class.
